Industrial Space Heating

Greenheck's space heating systems are designed to heat large spaces as comfortably and economically as possible. Greenheck's space heating models include the same commitment to quality you would expect from a worldwide leader in air movement and control products.

Direct Gas-Fired Heating

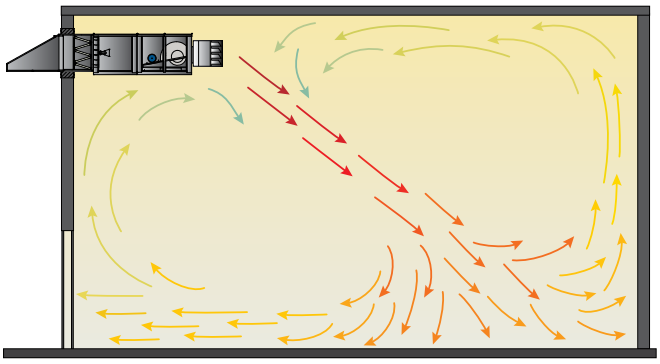
High-efficiency direct gas-fired burners promote excellent space comfort and low operating cost. The Greenheck space heating line includes the Greenheat 100% outdoor air, Greenheat 50/50 recirculation, and the 80/20 recirculation systems. These systems provide a variety of choices to meet the needs of your space heating applications.

Basic Applications

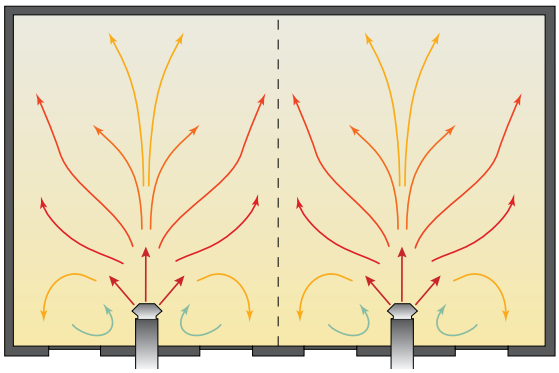
- Warehouses
- Manufacturing facilities
- Distribution centers
- Other large spaces in need of heat

Space Heating Basics

High-velocity, high-temperature air is discharged at a downward angle to provide effective mixing and even heat distribution throughout the space. Each unit operates in response to local conditions to provide heating when and where heat is needed.



High-velocity discharge air directed properly by the diffuser limits stratification (elevation temperature difference)



Typical air distribution pattern is shown as high-velocity discharge air mixes with space air for even heating

Greenheck space heating systems introduce outdoor air to the space, improving indoor air quality (IAQ) and positively pressurizing the building. Positive pressurization offsets the effects of cold air infiltration that would otherwise occur near doors and other openings. The air changes per hour (ACH) introduced by the space heating systems should exceed the natural cold air infiltration rate.

Space Heating Comparison

Properties	Air Turnover	Unit Heaters	Infrared Tube Systems	Greenheck Space Heating	
				100%	80/20
Heating Efficiency	Low (80%)	Low (80%)	Low (80%)	High (92%)	High (92%)
Offsets Cold Air Infiltration	No*	No	No	Yes	Yes
IAQ Benefits	No*	No	No	Yes	Yes
Stratification Effects	Limited	Yes	Yes	Limited	Limited

*Without outdoor air modification

Space Heating Rules of Thumb

Space Heating Capacities[A]	Air Changes Per Hour[B]	Effects of Insulation[C]
Buildings < 100,000 ft²	ACH 100% Outdoor Air	Well-insulated buildings
One heater per 30,000 to 50,000 ft²	~ 0.10 to 0.50 ACH	Require 15 to 20 Btu per hour/ft²
Buildings > 100,000 ft²	ACH - 50/50 Recirculation	Minimally insulated buildings
One heater per 50,000 to 100,000 ft²	~ 0.10 to 0.50 ACH	Require 20 to 30 Btu per hour/ft²

A It is recommended that at least two units be used for space heating applications. Multiple units add redundancy and also promote a more even heating distribution across the space.

B Natural winter infiltration rate is 0.10 to 0.20 ACH for tight buildings.

C Colder climates will tend to be at the higher end of these ranges.

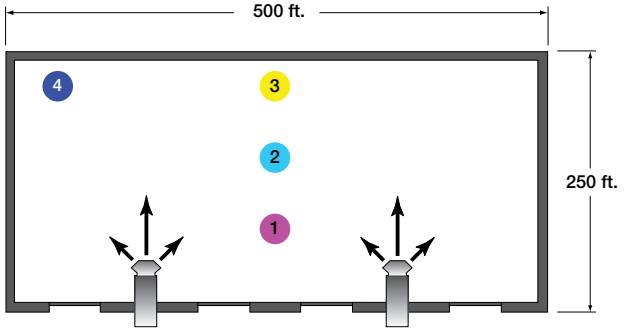
Proven Performance

Greenheck's space heating systems have heated millions of square feet of warehouses, distributions centers, and manufacturing facilities.

Results:

- Even heating throughout the space
- Excellent destratification
- Consistent space temperatures
- Proven performance

Typical Space Heating Application



Numbers 1-4 referencing data in Figures 1 and 2 below

Typical Week of Winter Operation

In *Figures 1 and 2*, temperature data is displayed for a typical week of winter operation, with readings recorded every 30 minutes. The color code and numbers correspond to the temperature sensor location.

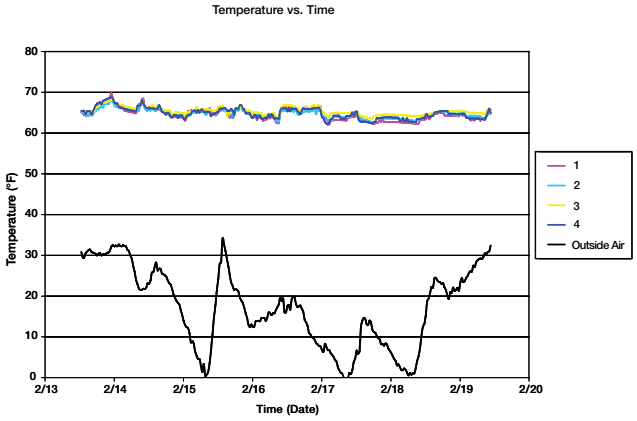


Figure 1

At 5 ft. off the floor, temperatures at any two points are ± 2°F *(-1.1°C)*

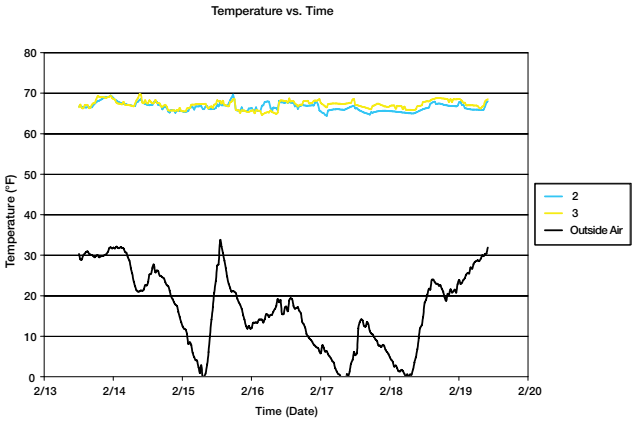

Figure 2

Temperature gradients from 5 ft. to 25 ft. off the floor are ± 2°F *(-1.1°C)*

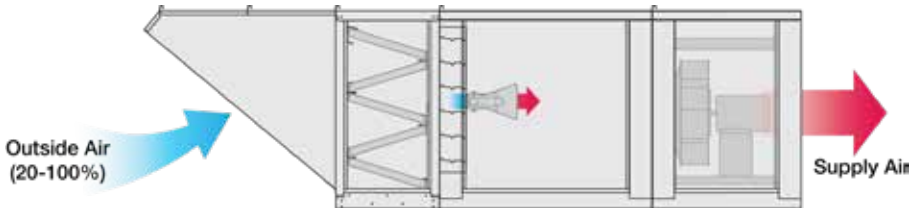
As weather changes, and doors open and close, the space temperature at 5 ft. off the floor remains within ± 3°F *(-1.7°C)* of the 65°F *(18°C)* set point

Greenheat 100% Outdoor Air System

The Greenheat 100% outdoor air systems provide maximum heating with maximum airflow. Air is supplied to the space at a high velocity and high discharge temperature (120-140°F). This unit cycles both the blower and direct-fired burner on a call for heat from a remote space thermostat. Utilizing 100% of the outdoor air positively pressurizes the space to offset the effects of cold air infiltration. This system is great for poorly insulated spaces with high infiltration rates such as warehouses and distribution centers.

Additional Benefits:

- Low installation cost on buildings greater than 25,000 ft²
- Low operating costs
- Low moisture content from combustion improves indoor comfort
- Fresh outdoor air improves IAQ
- Provides summer ventilation

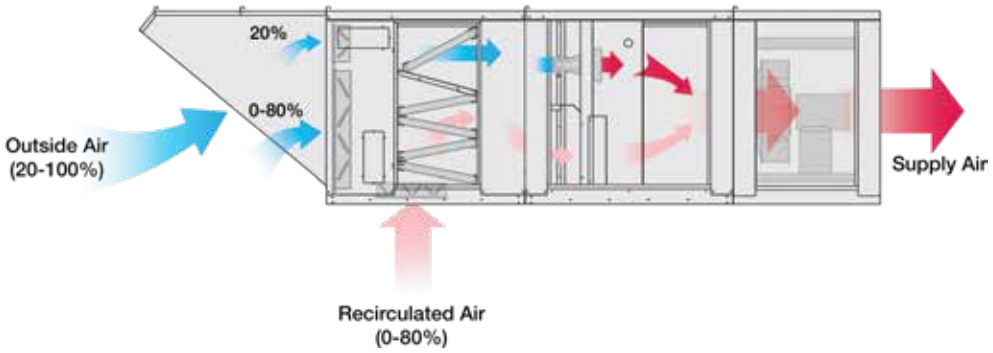


80/20 Recirculation System

The 80/20 recirculation system is a hybrid make-up air system. Supply air is a variable mixture of return air and fresh outdoor air. The intelligent unit design allows only fresh outside air to pass across the burner and ensures that mixing occurs downstream of the heater section. Outdoor air volumes vary from 20% to 100% of total airflow, often configured to respond to building pressure fluctuations. The 80/20 units are excellent for facilities with mechanical exhaust systems, especially when the exhaust volume is variable. The fan runs continuously to respond to varying exhaust volumes, and the heat runs continuously in winter operation to satisfy a remote space sensor. Discharge temperatures typically range from 80-110°F.

Additional Benefits:

- Pressurizes building to offset infiltration
- Responds well to mechanical exhaust systems with varying airflows
- Fresh outdoor air and filtered return air improve IAQ
- Provides summer ventilation



Roof-Mounted Installation

Greenheck space heating units feature horizontal (indoor) and downblast (outdoor) discharges as standard, and factory roof curbs are available.

Horizontal Discharge - Arrangement HZ

Downblast Discharge - Arrangement DB

Indoor Installation

Greenheat units have a pre-engineered thru-wall installation option, which is ideal when a roof penetration is not desirable. The following factory options facilitate easy installation and ensure problem-free installation:

Weatherhood

A full, downturn design on 100% units, with a generous intake area to minimize intake velocity and moisture entrainment.

Thru-Wall Sleeve

The thru-wall sleeve provides an attachment interface between the weatherhood and burner section. The sleeve accommodates walls up to 15 inches (*38 cm*) in depth.

Filter Section

The V-bank aluminum mesh filter section strips fine mist in addition to providing filtration for outside air. A drain captures any moisture that enters the filter section and directs it to the outside of the building.

100% Outdoor Air Greenheat

Features and Accessories

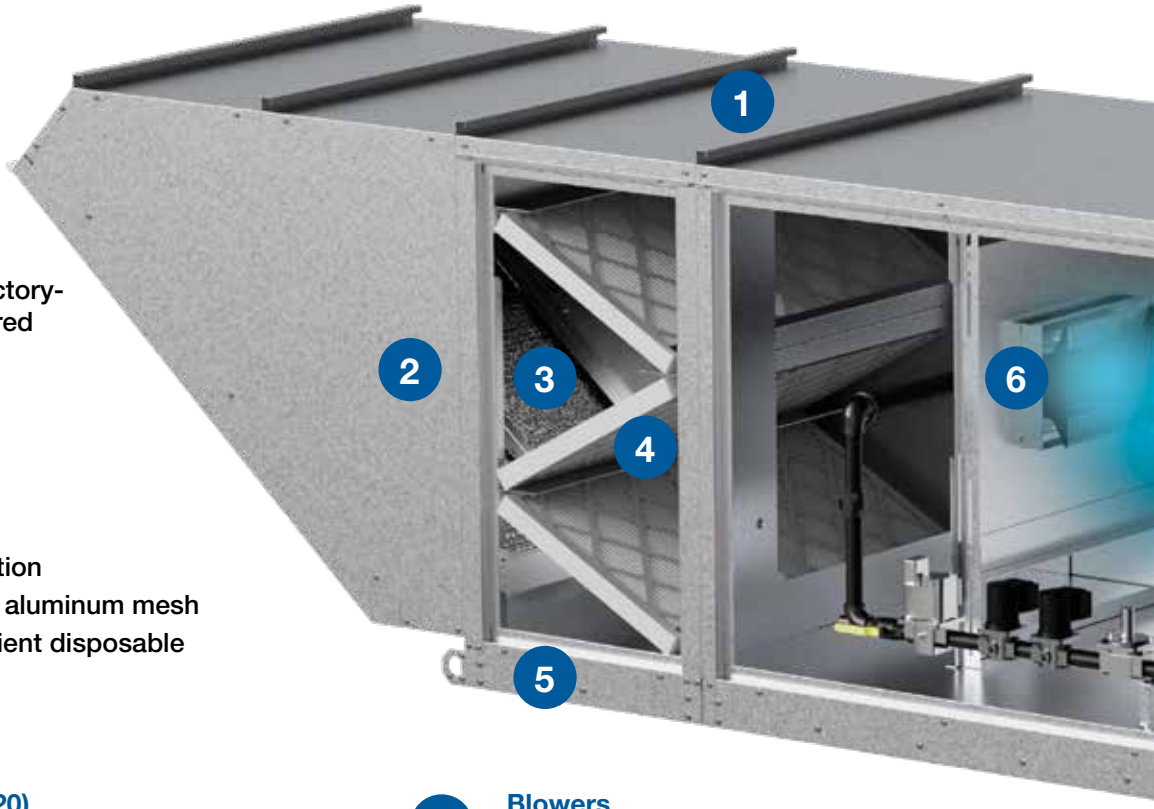
GREENHECK
Building Value in Air.

1 Construction

- Designed for maximum weather resistance
- Constructed of heavy-gauge G90 galvanized steel
- Lifting lugs are standard
- Single or double wall construction with 1-inch fiberglass insulation
- Large hinged doors and access panels

2 Weatherhood

- Standard weatherhood with birdscreen for outdoor installations (100% Outdoor Air and 80/20)
- Filtered thru-wall weatherhood with 2-inch aluminum mesh filters for indoor installations (100% Outdoor Air)



3 Dampers

- Low-leakage, factory-mounted and wired dampers with limit switches

4 Filters

- V-bank filter section
- 2-inch washable aluminum mesh
- 2-inch 30% efficient disposable

5 Recirculation (80/20)

- Building pressure control via remote photohelic gauge (80/20)
- Filtered return air

6 Direct Gas-Fired System

- High-quality cast aluminum burners with stainless steel mixing plates
- ETL Listed to ANSI Z83.4-2004 for 100% outdoor air and ANSI Z83.18-2000 for recirculation
- Full electronic modulation burner control
- Flame safeguard with digital fault indicator capability
- 25:1 turndown ratio

7 Blowers

- Accurate, third-party accredited air performance ratings
- Double-width, double-inlet forward-curved wheels
- Balanced wheels to ensure a vibration-free operation
- Neoprene or spring vibration isolators

8 Diffuser

- 3-way design for both horizontal and downblast discharge
- 45° diffuser elbow (not shown) included with the downblast discharge

Space Heating Controls

GREENHECK
Building Value in Air.

Greenheat Remote Control Panel

- Secure access
- Indicating lights
- Keyed switch for summer and winter modes
- Thermostat (not shown) is located inside the panel

Greenheat Temperature Control 100%

- The Greenheat space heating control system cycles the blower and burner on a call for heat from a factory provided space thermostat.

80/20 Remote Control Panel

- Includes toggle switches for fan and heating modes
- Room thermostats and photohelic pressure gauge

80/20 Recirculation Temperature Control Room Control (80/20 Standard)

- A manually adjusted room thermostat provides feedback to the unit controls. This feedback varies the discharge temperature to maintain the desired room set point.

DDC Interface Control

- Allows for an external signal (0-10 VDC or 4-20 mA) from the building management system.

Remote Touchscreen Interface

Remote Touchscreen with intuitive LCD Display offering end user control of the Make-Up Air unit from the space, allowing maximum flexibility and convenience.

Accessories

- Remote panels
- Roof curb with duct adapter
- Dirty filter switch
- Freeze protection
- Auxiliary contacts
- Service receptacle
- Inlet air sensor
- Painted exterior

9

Control Center (shown in image)

- 24 volt control voltage
- Magnetic motor starter with solid state overload protection
- Control transformer
- Disconnect switch
- Distribution terminal strip
- UL Listed, Recognized, or Classified electrical components
- Factory-wired for single point power connection

System Comparison

GREENHECK

[1] Equivalent temperature rise, plus the average of the entering outdoor and recirculation dry bulb temperatures, equals the actual discharge temperature. Maximum of 140ºF (*60°C*).

[2] ANSI standard Z83.18-2000 restricts the amount of recirculation based on temperature rise. A CO_2 sensor must be supplied by the factory if the temperature rise exceeds the maximum rating.

[3] Operation modes controlled by lockable switch. In Summer mode, heat is turned off and blower runs continuously for ventilation. In Winter mode, the blower and heat are enabled on a call for heat from a space thermostat. The burner will operate at the maximum unit rated discharge temperature to satisfy space temperature requirements.

[1] Airflow represents total volume delivered to space. Outdoor air volume is one-half of the total volume.
All data shown at standard elevation.

General: Space heat unit shall be manufactured by Greenheck or approved equal providing all specifications are met. Greenheck Greenheat or 80/20 equipment is used as the basis of design. Performance to be as scheduled on plans. Space heat shall be ETL Listed to ANSI Z83.4-2004, CSA 3.7-M99 (for 100% outdoor air) or ANSI Z83.18-2000 (for recirculation).

Gas Train and Controls: Direct gas-fired system shall have a draw through design and field adjustable burner baffles. Gas trains up to 400,000 Btu/hr shall include a direct spark ignition system. Gas trains greater than 400,000 Btu/hr shall include a pilot ignition system and shall have digital coded fault indicator capability. Fault indicator shall provide service history by storing codes for the last five faults. Dual safety shutoff valves shall be industrial duty and use 120 VAC control signals. Temperature control shall incorporate a full electronic modulation control system.

Unit Casing and Frames: Unit shall be of internal frame type construction of galvanized steel. All frames and panels shall be G90 galvanized steel. Where top panels are joined there shall be a standing seam to ensure positive weather protection. All metal-to-metal surfaces exposed to the weather shall be sealed, requiring no caulking at jobsite. All components shall be easily accessible through removable doors.

Insulation: Unit casing to be lined with 1-inch fiberglass insulation where specified. Insulation shall be in accordance with NFPA 90A and tested to meet UL 181 erosion requirements. Double wall shall be provided where specified.

Fan Section: Centrifugal fans shall be double-width, double inlet. Fan and motor shall be mounted on a common base and shall be internally isolated. All blower wheels shall be balanced. Ground and polished steel fan shafts shall be mounted in permanently lubricated ball bearings or ball bearing pillow blocks. Bearings shall be selected for a minimum (L10) life in excess of 100,000 hours at maximum cataloged speeds.

Motors and Drives: Motors shall be energy efficient, complying with EPACT standards, for single speed ODP and TEFC enclosures. Motors shall be permanently lubricated, heavy-duty type, matched to the fan load and furnished at the specified voltage, phase and enclosure. Drives shall be sized for a minimum of 150% of driven horsepower. Pulleys shall be cast and have machined surfaces, 15 horsepower and less shall be supplied with an adjustable drive pulley.

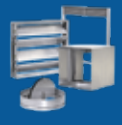
Electrical: All internal electrical components shall be prewired for single point power connection with exception of the larger evaporative cooling sections. All electrical components shall be UL Listed, Recognized or Classified where applicable and wired in compliance with the National Electrical Code. Control center shall include motor starter, control circuit fusing, control transformer for 24 VAC circuit, integral disconnect switch and terminal strip. Contactors, Class 20 adjustable overload protection and single-phase protection shall be standard.

Filter Section: Filter section shall be designed such that velocities across the filters do not exceed 550 feet per minute. Filters shall be 2-inch washable aluminum mesh or 2-inch disposable.

Weatherhood: Weatherhood shall be constructed of G90 galvanized steel with birdscreen (Greenheat 100% and 80/20) mounted at the intake.

Recirculation: Recirculation airflow shall be adjustable (80/20). Input signal for return damper shall be from building pressure sensors or external signals. Recirculated air shall not be permitted to pass across the burner. Return air shall be filtered.

GREENHECK
Building Value in Air.



Building Value in Air

Greenheck delivers value to mechanical engineers by helping them solve virtually any air quality challenges their clients face with a comprehensive selection of top quality, innovative air-related equipment. We offer extra value to contractors by providing easy-to-install, competitively priced, reliable products that arrive on time. And building owners and occupants value the energy efficiency, low maintenance and quiet dependable operation they experience long after the construction project ends.

Our Commitment

As a result of our commitment to continuous improvement, Greenheck reserves the right to change specifications without notice.

Specific Greenheck product warranties are located on greenheck.com within the product area tabs and in the Library under Warranties.
