

Application

Model HCDR-350 is a heavy duty round industrial control damper with a flanged style frame. It is designed to control airflow and provide shut off in HVAC or industrial process control systems. A variety of optional features allows the model HCDR-350 to be tailored to the application.

Bearings and Shafts

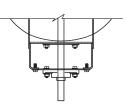

External Mounted Ball or Sleeve Bearing (Bronze Sleeve Standard, Ball Optional)

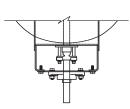

External Mounted Bronze Sleeve Bearing With O—Ring (Optional)

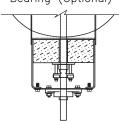

O—Ring Shaft Seal with Outboard Mounted Bearing (Optional)

Double Gland Stuffing Box with Outboard Mounted Bearing (Optional)

Insulated Outboard Double Gland Stuffing Box with Outboard Mounted Bearing (Optional)

*Allows for 3 in. of insulation.

Blade Seal (Rolled Bar Blade Stops Required)

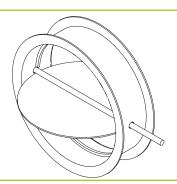

Standard - Does not include Blade Seals

Optional - EPDM Blade Seals (250°F [121°C] max.)

Optional - Silicone Rubber Blade Seals (400°F [204°C] max.)

Optional - Fiberglass Blade Seals (800°F [427°C] max.)

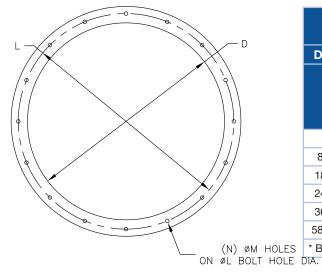

Optional - Ceramic Blade Seals (1000°F [538°C] max.)

 $^{^{\}star}$ The axle diameter is % in. (19mm) when outboard carbon bearings are selected for dampers 12 inches and below.

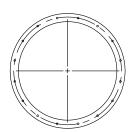

Bolt Holes

The recommended bolt hole pattern is shown in the table below. Customer must specify bolt holes that are parallel to the axle centerline or that straddle the axle centerline as shown in the diagrams below. The factory can also provide bolt hole sizes and patterns other than those shown.

Performance Data

AMCA Test Figure 5.3

Figure 5.3 Illustrates a fully ducted damper. This configuration has low pressure drop because entrance and exit losses are minimized by straight duct runs upstream and downstream of the damper.

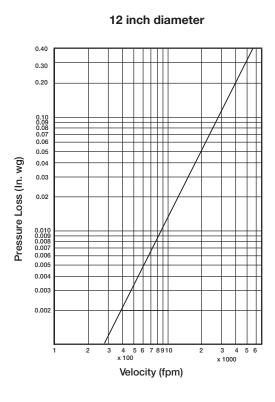

Pressure Drop Data

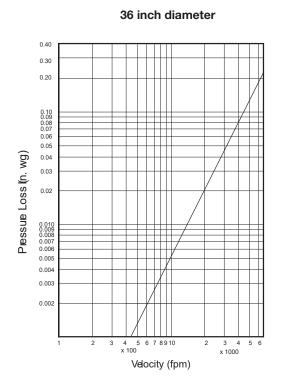

This pressure drop data was conducted in accordance with AMCA Standard 500-D using Test Figure 5.3. All data has been corrected to represent standard air at a density of 0.075 lb/ft³(1.2 kg/m³).

Actual pressure drop found in any HVAC system is a combination of many factors. This pressure drop information along with an analysis of other system influences should be used to estimate actual pressure losses for a damper installed in a given HVAC system.

NOTE:

PS refers to damper with standard pin blade stop BS refers to damper with rolled bar blade stop

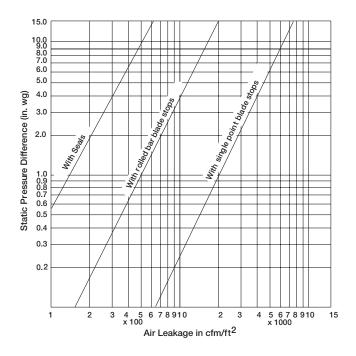

Leakage Data

Damper leakage (with blades fully closed) varies based on the type of blade stops and low leakage seals applied. Model HCDR-350 is available with no seals (standard) or with EPDM or silicone rubber blade seals. Leakage testing was conducted in accordance with AMCA Standard 500-D and is expressed as cfm/ft 2 of damper face area. All data has been corrected to represent standard air at a density of 0.075 lb/ft3 (1.2 kg/m 3).
