

BULLETIN

JULY 15, 2024

TO: All Greenheck Representatives
FROM: Dave Mayer
Product Manager, PRV and Roof Curbs
SUBJECT: Roof Curb Manufacturing Update

Greenheck is excited to announce that we are expanding our roof curb manufacturing footprint into our Kings Mountain, North Carolina plant! This expansion will help us continue to drive down lead times and reduce transit times.

Beginning in August 2024 and ramping up over the next several months, many of our popular curb models shipping to the southeastern region of the country will be manufactured in North Carolina. This includes the GPI and GPF families, curb extensions, and equipment supports.

In addition, Greenheck is relocating all sound attenuating curb (AT models) production to the North Carolina plant. As a result of this move, production of these models will be temporarily halted for the month of August. Any sound curb products already in the production schedule will still be built and shipped as normal. New orders placed after this communication will be scheduled in the month of September and we will not be able to accept QB orders.

Thank you for your patience while we work to expand our manufacturing footprint for roof curbs.
